Aerial Work Platforms

— Prevent Accidents & Repairs with Inspections and Maintenance —

MAINTENANCE

Preventive Maintenance Programs

The best way to ensure the life of your aerial platform and prevent minor problems from turning into costly repairs is the use of a regular preventive maintenance program. By servicing your aerial platforms at regular intervals, you will be assured of limited downtime, maximum productivity and most importantly, safety. A regular preventive maintenance program can be customized to fit your company's needs and will help to control the costs associated with major repairs and prolonged downtime.

Major Repairs – Extensive repairs to equipment become necessary as a result of age, daily use, neglect and abuse. When repairs (major or minor) become necessary Altorfer Rents can provide estimates and complete repairs for not just aerial lifts but all types and brands of construction equipment. Out in the field or in our shop, Altorfer Rents has an experienced staff of Service Technicians to assist with all of your equipment repair needs.

Parts – Altorfer Rents has access to parts for all major brands of aerial lifts. We stock parts for Skyjack, Genie and JLG and can usually provide delivery of non-stock parts on an overnight basis.

Operator and Safety Training – ANSI Specification A92.6-2006 dictates that all users of aerial platforms receive operator and safety training for those aerial platforms which are utilized at the workplace or jobsite. Altorfer Rents can provide operator training for individuals or groups and can provide proper documentation after training is completed. Operator and safety training can be conducted at our facility or can be performed at your office or jobsite. We are anxious to structure classes that satisfy your individual needs and timetable.

INSPECTIONS

ANSI Inspections

Did you know that OSHA refers to the ANSI specifications when dealing with aerial work platforms? ANSI A92.6 Manual of Responsibilities for owners and operators states, "The owner of an aerial platform shall ensure that an annual inspection is performed on the aerial platform no later than thirteen (13) months from the date of the prior annual inspection. The inspection shall be performed by a person(s) qualified as a mechanic on the specific make and model of the aerial platform."

Also, if a malfunction / problem is detected, "the owner shall not place the aerial platform into service until all malfunctions / problems have been corrected," says the ANSI Manual.

Allowing a qualified lift technician to perform annual inspections on your lifts protects the safety of your employees and protects your company against OSHA violations and expensive liabilities that could result from an accident involving your aerial equipment.
